Kevin B. Liu

(732) 810-5793 | kevin-liu@princeton.edu | linkedin.com/in/kevin-liu-princeton/ | github.com/Kevin-Liu-01

Education

Princeton University — Princeton, NJ
Bachelor's in Computer Science — *Expected May 2028*
Coursework: Programming Systems, Data Structures & Algorithms, Statistics, Vector Calculus, Linear Algebra
Organizations: Hoagie Software Development Club, TigerApps, HackPrinceton, Princeton Powerlifting, Sympoh Dance Co.
Technologies: Tensorflow, PyTorch, Keras, AutoML, Python, React, Tailwind, Typescript, Javascript, Java, C, C++

Experience

Dedalus Labs (YC S25) — Jan 2026 – Present
Founding Engineer — *Princeton, NJ*
- Built model-agnostic agents powered by MCP, in addition to a production-grade SDK with secure, multi-tenant auth.

Sevenfold AI — Jun 2025 – November 2025
Founding Engineer — *Princeton, NJ*
- Built MVP for agent-powered end-to-end research workflow with vector search and contextual understanding.
- Designed context extraction framework to boost LLM response relevance by 4.6x.
- Driving roadmap, branding, and go-to-market strategy; launched alpha with early research users.

Amazon Web Services — Summer 2025
Software Development Engineer Intern — *Bellevue, WA*
- Built internal APIs to support inventory workflows, streamlining feature deployment and improving response time by 37%.
- Refactored reconciliation pipeline, reducing technical debt and improving test coverage by 25%.
- Implemented dashboard with Amazon-Q LLM integration, enabling PM collaboration and streamlining feature deployment.

Bloomberg L.P. — Summer 2024
Software Engineering Intern – Core Products (DT-CADEA) — *Princeton, NJ*
- Developed a Random Forest-based ML model to classify corporate 6K/8K filings, accelerating classification by 55% and boosting accuracy to 86%.
- Engineered JIRA-based workflow tools with 99.9% uptime, enhancing data transparency for 7 teams and 5k+ internal users.
- Led technical design reviews and collaborated with cross-functional stakeholders across Data Acquisition and Finance.

Software Engineering Intern – Financial Instruments (DT-FI) — Summer 2023
- Built a real-time market feed platform using Next.js and React to track treasury bonds, improving remediation speed by 4x.
- Enhanced front-end UI and backend stability, eliminating all user-input crashes and reducing latency and memory usage.
- Led Agile sprints and coordinated Linux infrastructure migration with Data Tech teams.

AT&T Labs Research — Fall 2023
AI Research Intern – NLP & Intelligent Agents — *Middletown, NJ*
- Designed autonomous agents with Mixture-of-Experts LLMs via Gentopia to parse enterprise documents independently.
- Reduced document analysis time by 85% with potential for 11x cost savings; piloted tool on AT&T enterprise data.
- Partnered with data scientists and PMs to iteratively improve internal AI tooling across multiple departments.

Johns Hopkins University – UCredit.me — Fall 2022
Full Stack Software Engineer — *Baltimore, MD*
- Built responsive full-stack course selection platform using React and AWS Lambda for 6k+ students.
- Integrated backend APIs and frontend components in a CI/CD DevOps environment with iterative UX feedback.

Projects

Online Monmouth Math Competition (501(c)(3)) — Co-Founder, CTO
- Co-founded nonprofit running annual math competitions, providing free educational materials globally.
- Secured $32k in sponsorships, 2k+ signups, 6k+ community members.
- Led international volunteer student team to develop OMMC website, full-stack cloud database (OMMC Atlas), and Next.js test portal (OMMC Test Portal), using the T3 stack (TypeScript, TRPC, Tailwind.css).
